

OXIVOS

WEB DEVELOPMENT AGENCY

ROUND 1 · PROJECT TASK

Frontend Developer Project Task

Congratulations on moving to Round 1! 🎉 This is a hands-on task to see how you think, build, and ship. It's a **frontend-only** task using dummy data — no backend needed. We can't wait to see what you create.

Project Theme

Build a modern Fashion Store frontend. Oxivos builds e-commerce websites for clothing & fashion brands, so your task is to create the storefront of a fashion shop — the kind of site a real customer would browse, explore products, and add items to a cart.

Everything runs on **local dummy data** (a JSON/JS file you create). You don't need a database or a login system. Focus on clean UI, a smooth experience, and production-quality frontend code.

What You'll Build

REQUIRED PAGES

PAGE 01

Home

A hero/banner section plus a grid of featured products.

PAGE 02

Products (Listing)

All products in a responsive grid, with a category filter.

PAGE 03

Product Details

Full info for one product + an "Add to Cart" action.

PAGE 04

Cart

Added items with quantity and total price (client-side state).

Dummy Data

Create a local file with **10–12 products**. Use free images from Unsplash or Pexels. Here's a suggested shape for each product (feel free to extend it):

```
{
  "id": 1,
  "name": "Classic Cotton Panjabi",
  "category": "Panjabi",
  "price": 1490,
  "image": "https://images.unsplash.com/...",
  "rating": 4.5,
  "colors": ["White", "Navy"],
  "sizes": ["M", "L", "XL"],
  "inStock": true,
  "description": "Short product description..."
}
```

Must-Have Requirements

FIXED — DO THESE

- Built with **React (Vite)** or **Next.js** — your choice
- All data comes from your local dummy file (no backend required)
- **Fully responsive** — must look great on mobile, tablet, and desktop
- Client-side routing between all pages (React Router or Next routes)
- Cart works using proper state (Context / Redux / your approach)
- Handle **loading & empty states** (a short loader, an empty-cart view, etc.)
- Clean, modular, reusable components with a readable folder structure
- At least **8 meaningful Git commits** (not one big final push)
- Deployed live on **Vercel** — no console errors on the live site
- Submit a public **GitHub repo** + the **live link**

Your Creative Freedom

OPEN — SHOW YOUR STYLE

We give you the structure — **you** bring the creativity. These are fully up to you:

- The whole **visual design**: brand name, logo, colors, fonts, imagery, and overall vibe
- Layout, spacing, animations, and micro-interactions
- How you architect and organize your components
- How you present product details (image gallery, badges, size/color selectors, etc.)

Bonus points (pick any that excite you): search bar, sort by price, category filters, wishlist, dark mode, a product image gallery, skeleton loaders, cart quantity controls, or smooth page transitions. You don't need all of them — pick what shows your strengths best.

What We Look For

- **Code quality & structure** — clean, modular, easy to read (biggest weight)
- **Responsiveness** — flawless across all screen sizes
- **Real-world thinking** — states, edge cases, and no broken UI
- **Design sense** — attention to detail and polish
- **Git discipline** — meaningful, incremental commits

Deadline

Submit by: 17 July, 11:59 PM

Make sure the live site works, has no errors, and is responsive before you submit. Quality matters more than rushing.

What to Submit

Submit through the Google Form link below with:

Submission Form

1. Your Name
2. Your Email
3. Live Project Link (Vercel)
4. GitHub Repository Link

Submit here: forms.gle/hnUn6bCXq9QePrLZ8

A quick note: we're not looking for perfection — we're looking for how you think, how cleanly you build, and how much care you put into the details. Have fun with it, make it yours, and show us your best work. 🚀

Stuck or confused about anything? Message us on WhatsApp before the deadline — we're happy to clarify.
